

Disk Harrow Field Update

Disk Leveler

Models: Manual Level Turnbuckle Kit Numbers

- 3323 557-323V UPDATE KIT 3323DH MAN LEV
- 3326 557-325V UPDATE KIT 3326-3329DH MAN LEV
- 3329 557-325V UPDATE KIT 3326-3329DH MAN LEV
- 4330 557-327V UPDATE KIT 4330-4336DH MAN LEV
- 4333 557-327V UPDATE KIT 4330-4336DH MAN LEV
- 4336 557-327V UPDATE KIT 4330-4336DH MAN LEV

Hydraulic Level Kit Numbers:

- 557-324V UPDATE KIT 3323DH HYD LEV
- 557-326V UPDATE KIT 3326-3329DH HYD LEV
- 557-326V UPDATE KIT 3326-3329DH HYD LEV
- 557-328V UPDATE KIT 4330-4336DH HYD LEV
- 557-328V UPDATE KIT 4330-4336DH HYD LEV
- 557-328V UPDATE KIT 4330-4336DH HYD LEV

General Information

These instructions explain how to install the Disk Leveler Update Kits. If your Disk has the manual level (turnbuckle) option, then follow the instructions for the manual level kit. If your Disk has the hydraulic level (cylinder) option, then follow the instructions for the hydraulic level kit.

Manual Update

Refer the Disk Harrow operator's manual for detailed information on safely precautions. Refer to parts manual for part identification.

- 556-100M Operator's Manual
- 556-100P Parts Manual

Before You Start

For safety it is best to park machine on level concrete floor. Lower the disk blades to the ground and relieve all hydraulic pressure from all circuits. Review these instructions and make sure you understand where and how the components are installed, and which existing parts are removed or re-used.

Tools Required

- Basic Hand Tools
- Cutting Torch or Cutoff wheel

Disassembly Instructions

- Start by unfolding the wings and removing the manual transport locks, if installed, from lift cylinders and lower the machine to the ground. If machine is equipped with hydraulic leveling, activate leveling cylinder (1) until the leveler "L" (2) and level bar assembly (3) is loose (see Figure 1). Attach the tongue jack (4) to front of hitch and unhook tractor from disk. Remove all the hydraulic hose components from the hitch including the hoses, hose clamps, spring hose loop (5), lock valve (6), if equipped and 4" x 2 leveling cylinder (1), if equipped.
- Remove the manual pak container (7), manual level turnbuckle (8), if equipped, safety chain (9), safety chain support (10) and hitch clevis (11) from the hitch frame (12). Do not re-use the 1x7 Gr.8 hitch clevis bolts, new longer bolts are provided in the kits. Save all other hardware for re-assembly to new hitch frame.
- Remove the hitch frame (12) by removing the two 1 ¼ x 8 Gr.8 hex bolts (13) that connect it to the center frame. Save the hardware for re-assembly. Remove the Leveler "L" (2) from the center frame, and discard the 1" x 7 hex bolt, 1 x 7 pin, level gauge pointer (14) and level link rod (15). On narrow center models, 3323 to 3329, you will have to unbolt the depth stop valve from the center frame to remove the 1" x 7 Leveler "L" bolt. You may re-attach the valve after the bolt is removed.
- Disconnect and remove the level bar assembly (3) from the torque tube (16). Keep level bar assembly (3), 1 x 7" pin (17) and keeper bolt (18) for re-assembly.
- On models 3326 to 4336, unpin and remove the front two fold cylinders (19), attach a piece of hose between cylinder fittings to prevent oil from escaping from the cylinders. Remove the front fold bracket (20) by removing the ¾ x 2 ½ hex bolts (21), save bolts for re-assembly. Disconnect any hydraulic hoses that are in the way for removal of the front fold bracket.
- On 4330 to 4336 machines, unbolt and remove the top and bottom front tie strap plates (22) that hold the two center frame halves together. Save for re-assembly.
- Finished with Disassembly. Proceed to Torching Instructions pg. 4.

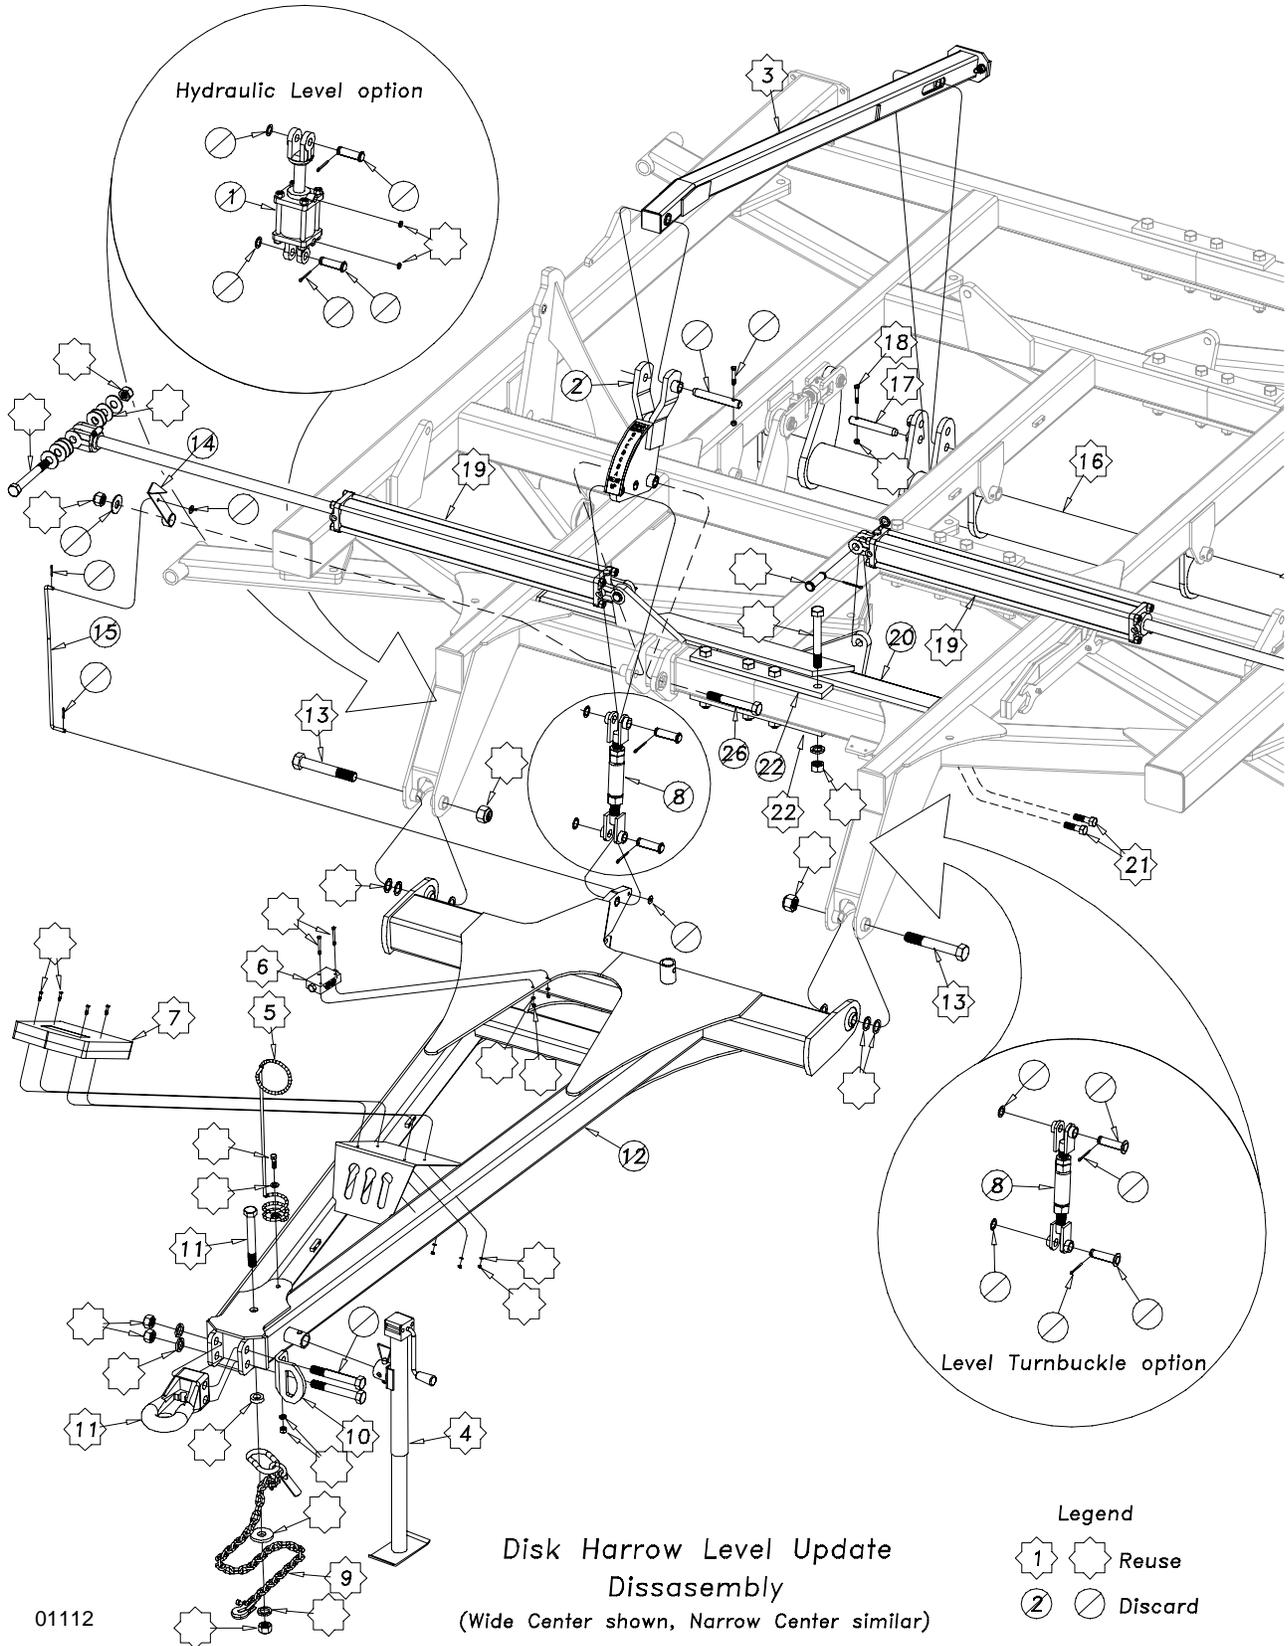

Figure 1

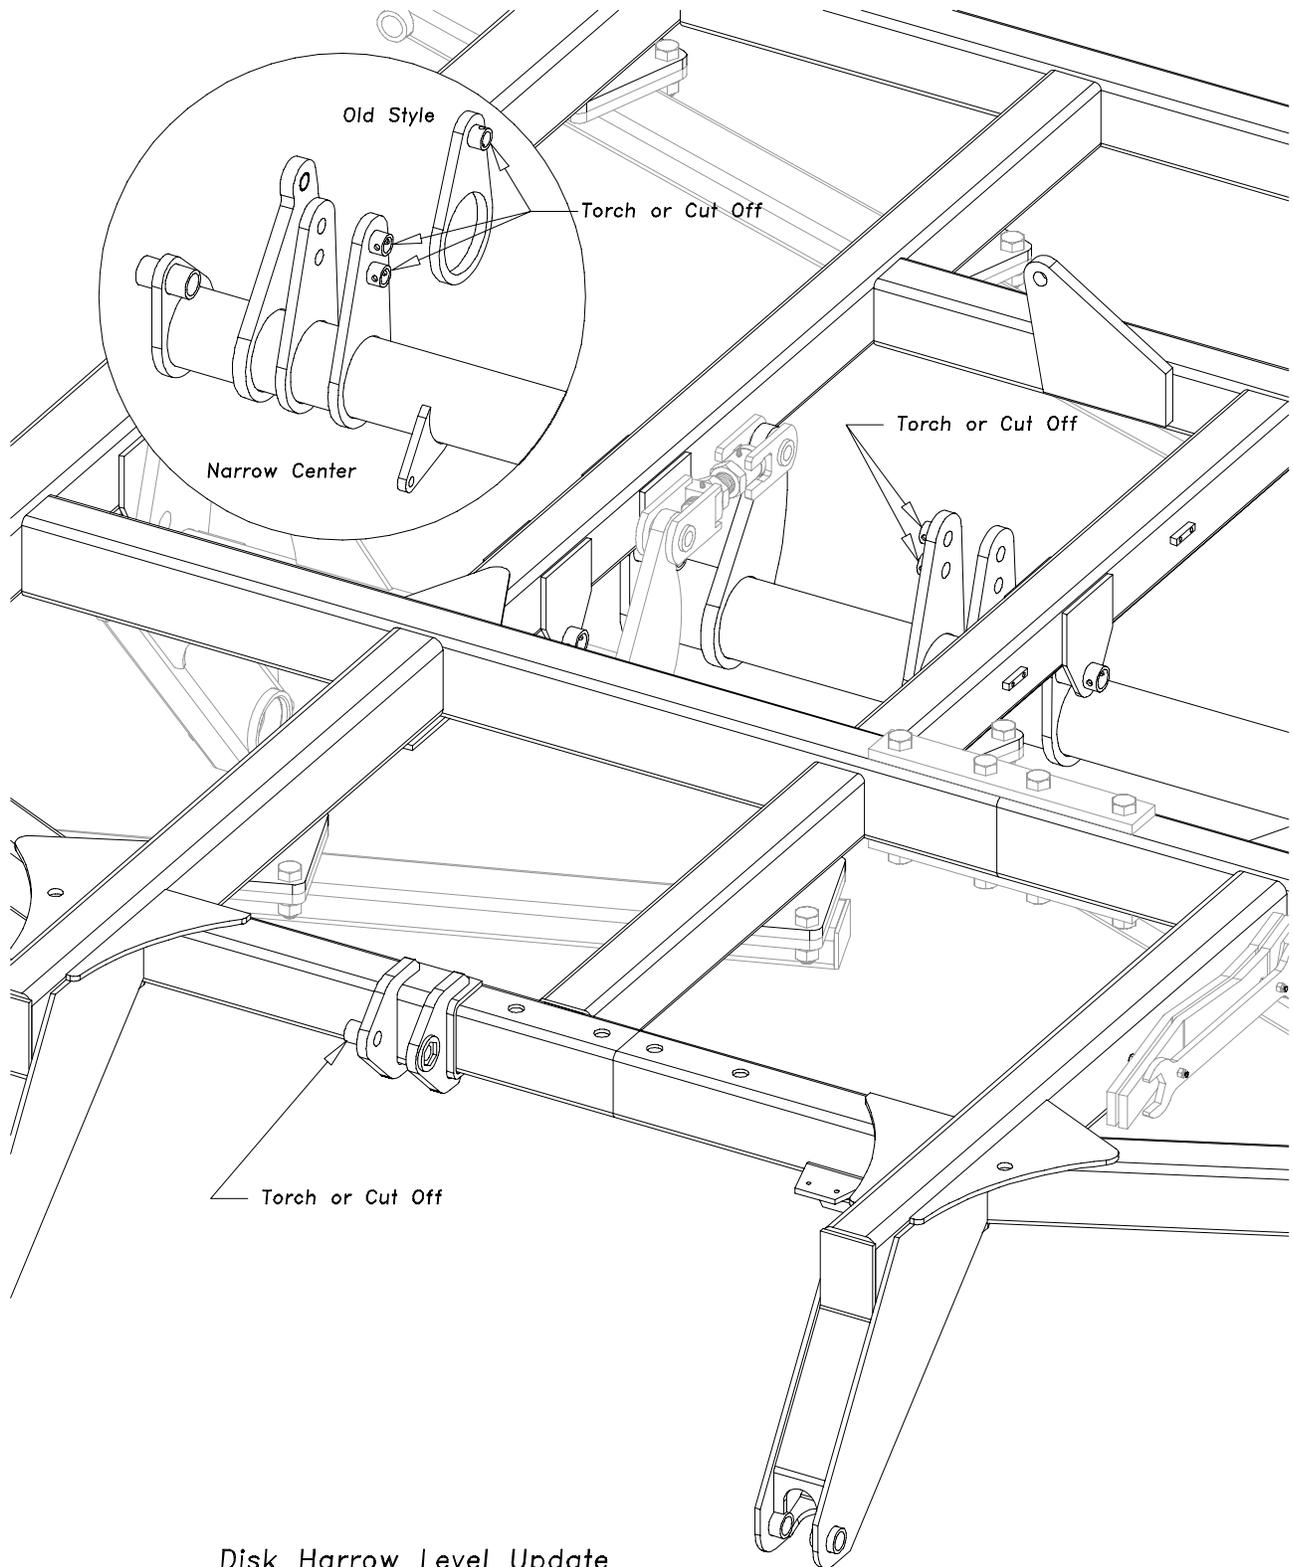

Torching Instructions

- Using a torch or cut-off grinding wheel, remove the collar on the front of the center frame as shown in Figure 2. Cut off flush with plate and grind away any high spots. This hole will not be used on new system.

- Using a torch or cut-off grinding wheel, remove the collar(s) on the torque tube-level bar connection lugs (see Figure 2). The narrow center torque tube lugs may have one or two collars depending on the age of the machine. Cut off flush with plate and grind smooth. These holes will be reused on the new system.

- Finished with Torching Instructions. Proceed to Assembly Instructions pg. 6.

Disk Harrow Level Update
Torch Diagram
(Wide Center shown, Narrow Center similar)

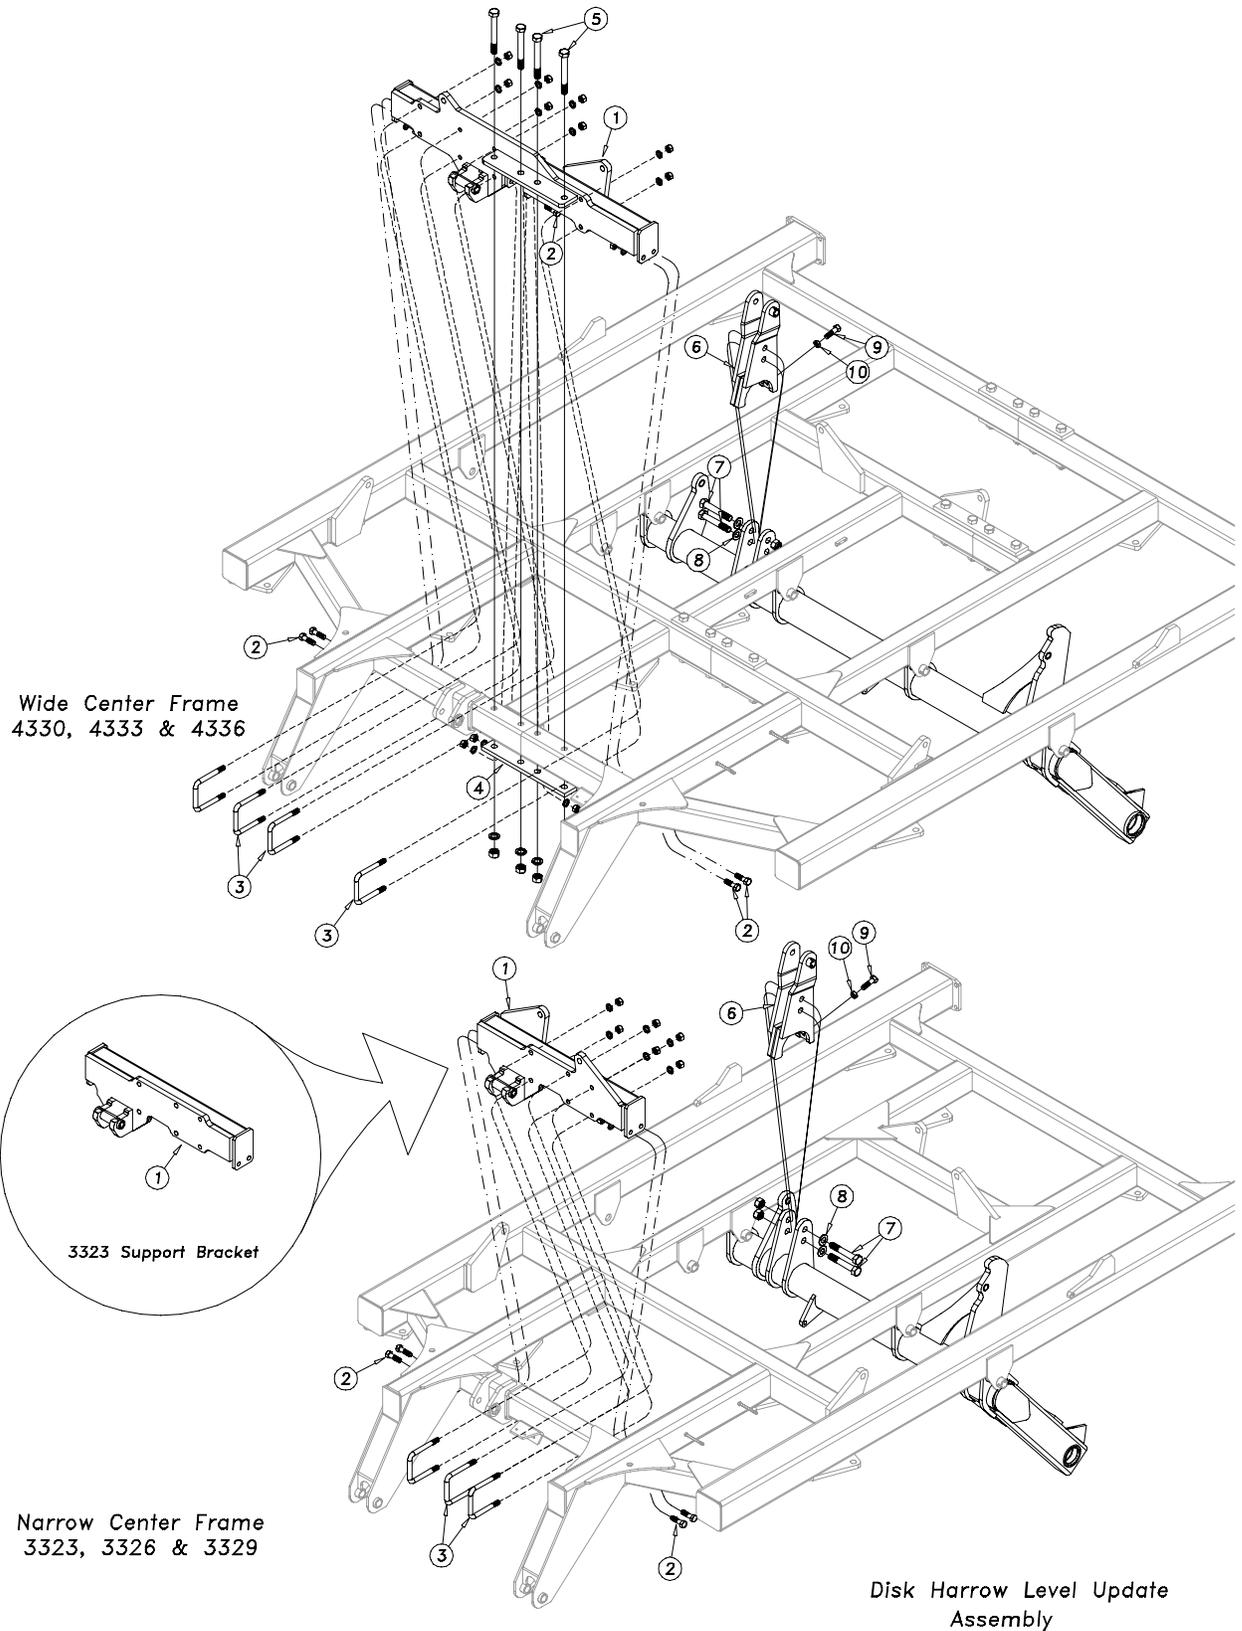

01116

Figure 2

Assembly Instructions (Part 1)

- Start by inserting the new front fold bracket (1) into the front of the center frame (see Figure 3). Note: 3323 disks have a new frame support bracket that bolts into the front fold bracket position. Insert the $\frac{3}{4}$ x $2\frac{1}{2}$ hex bolts (2) underneath the frame but do not tighten. *(On wide center units 4330-4336, the center holes for the $\frac{3}{4}$ x $2\frac{1}{2}$ " hex bolts may not line up properly. It is OK to substitute (2) $\frac{5}{8}$ x 6" Gr.5 hex bolts to replace the (4) $\frac{3}{4}$ " x $2\frac{1}{2}$ hex bolts.)* Insert the $\frac{3}{4}$ x 5 x 6 $\frac{1}{2}$ u-bolts (3) around the center frame front tube and into the holes of the new bracket. On wide center models 4330-4336, re-install the bottom tie-plate (4) and tie-plate bolts (5) that connect the two center frame halves. After all bolts and u-bolts are in you can tighten the lock washers and hex nuts.
- Bolt the leveler extension bracket (6) to the torque tube leveler ears with the threaded hole orientated to the back of the machine. Use one (two on some machines) new 1 x 6 (long thread) Gr.8 hex bolt(s) (7) with 1" SAE flat washer (8) against head of bolt. Secure with 1" lock nut. Insert a $\frac{3}{4}$ x $2\frac{1}{2}$ " hex bolt (9) with $\frac{3}{4}$ " jam nut (10) into the threaded hole in the bracket and tighten down to remove slack in the assembly. Tighten jam nut (10) to secure.
- At this time you will want to reinstall the front fold cylinders and re-connect any disconnected hydraulic hoses (refer to the attached hydraulic schematics, pgs 10 & 12 for proper hose plumbing). Use the same cylinder hardware as before. **Do not connect rod end of fold cylinders at this time, block fold cylinders up for purge procedure.**
- Proceed to Assembly Instructions (Part 2) pg. 8.

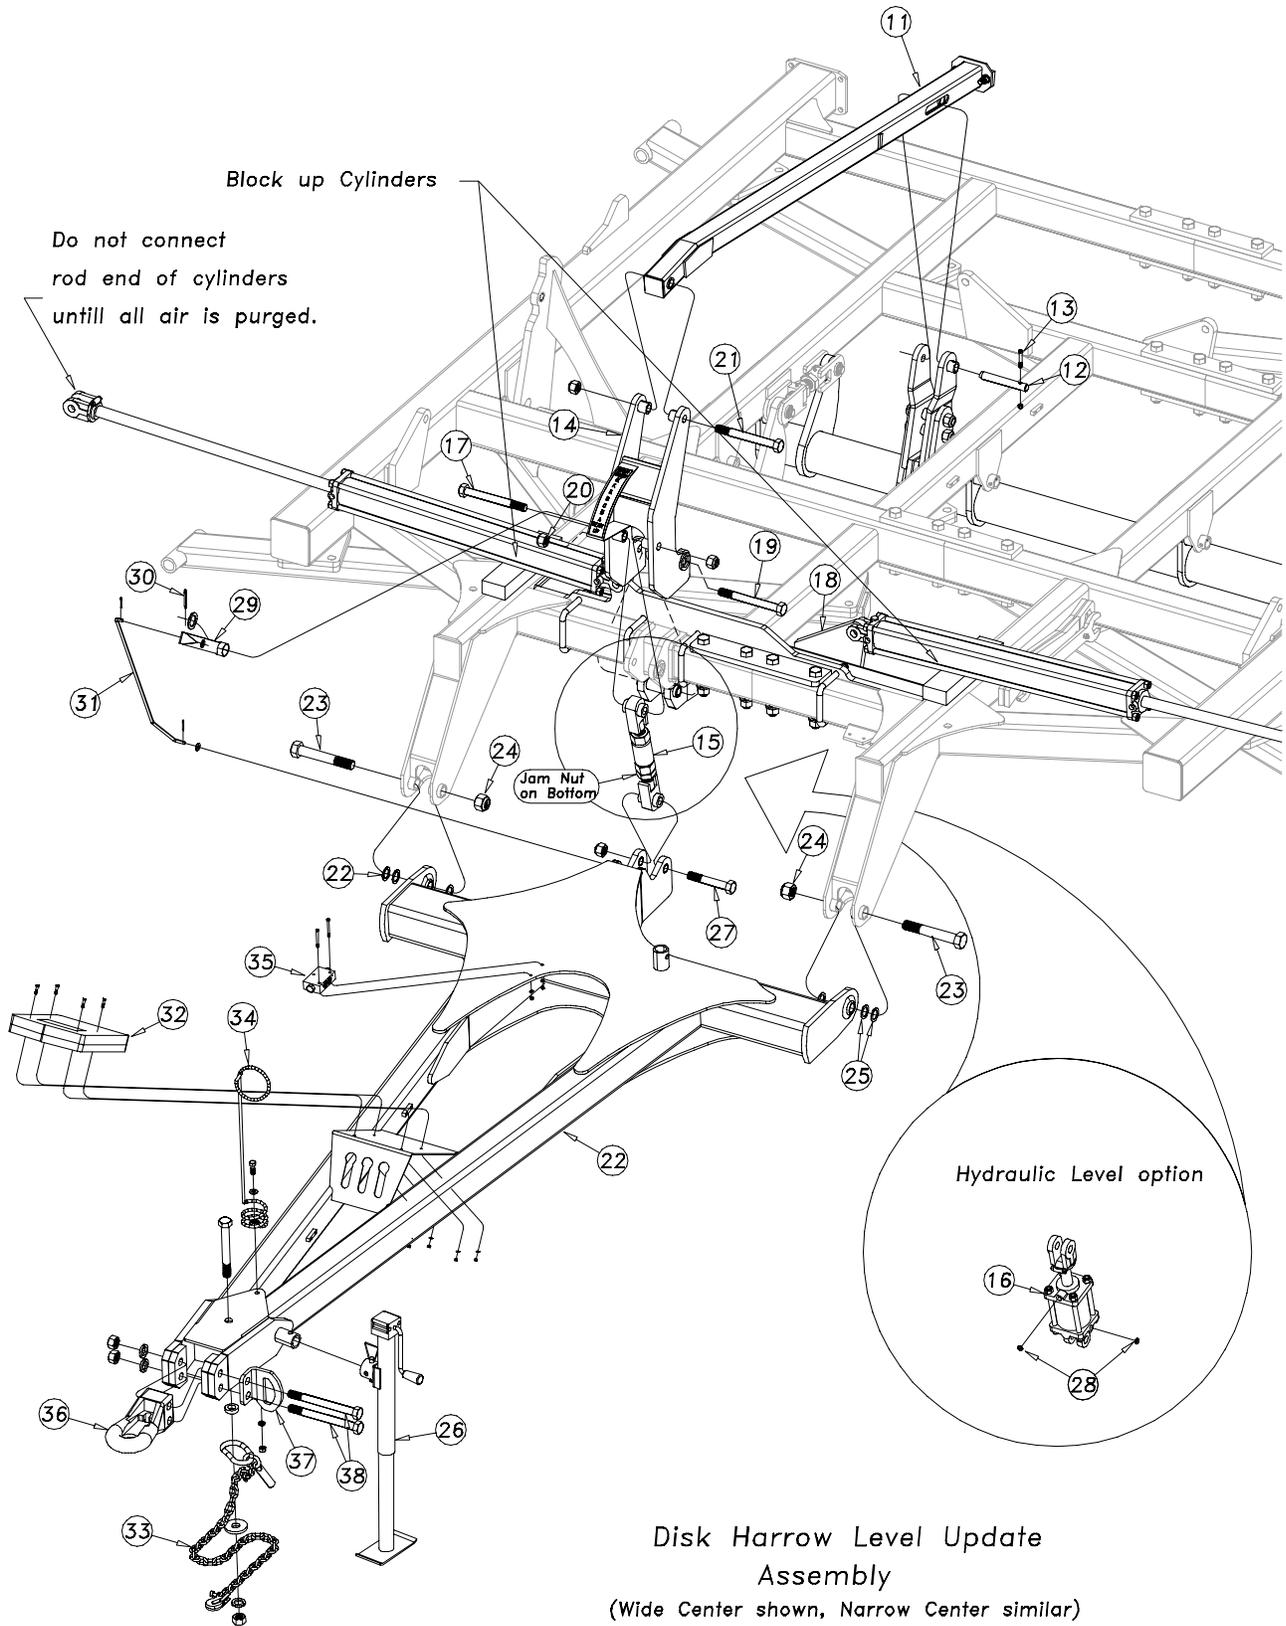

01117

Figure 3

Assembly Instructions (Part 2)

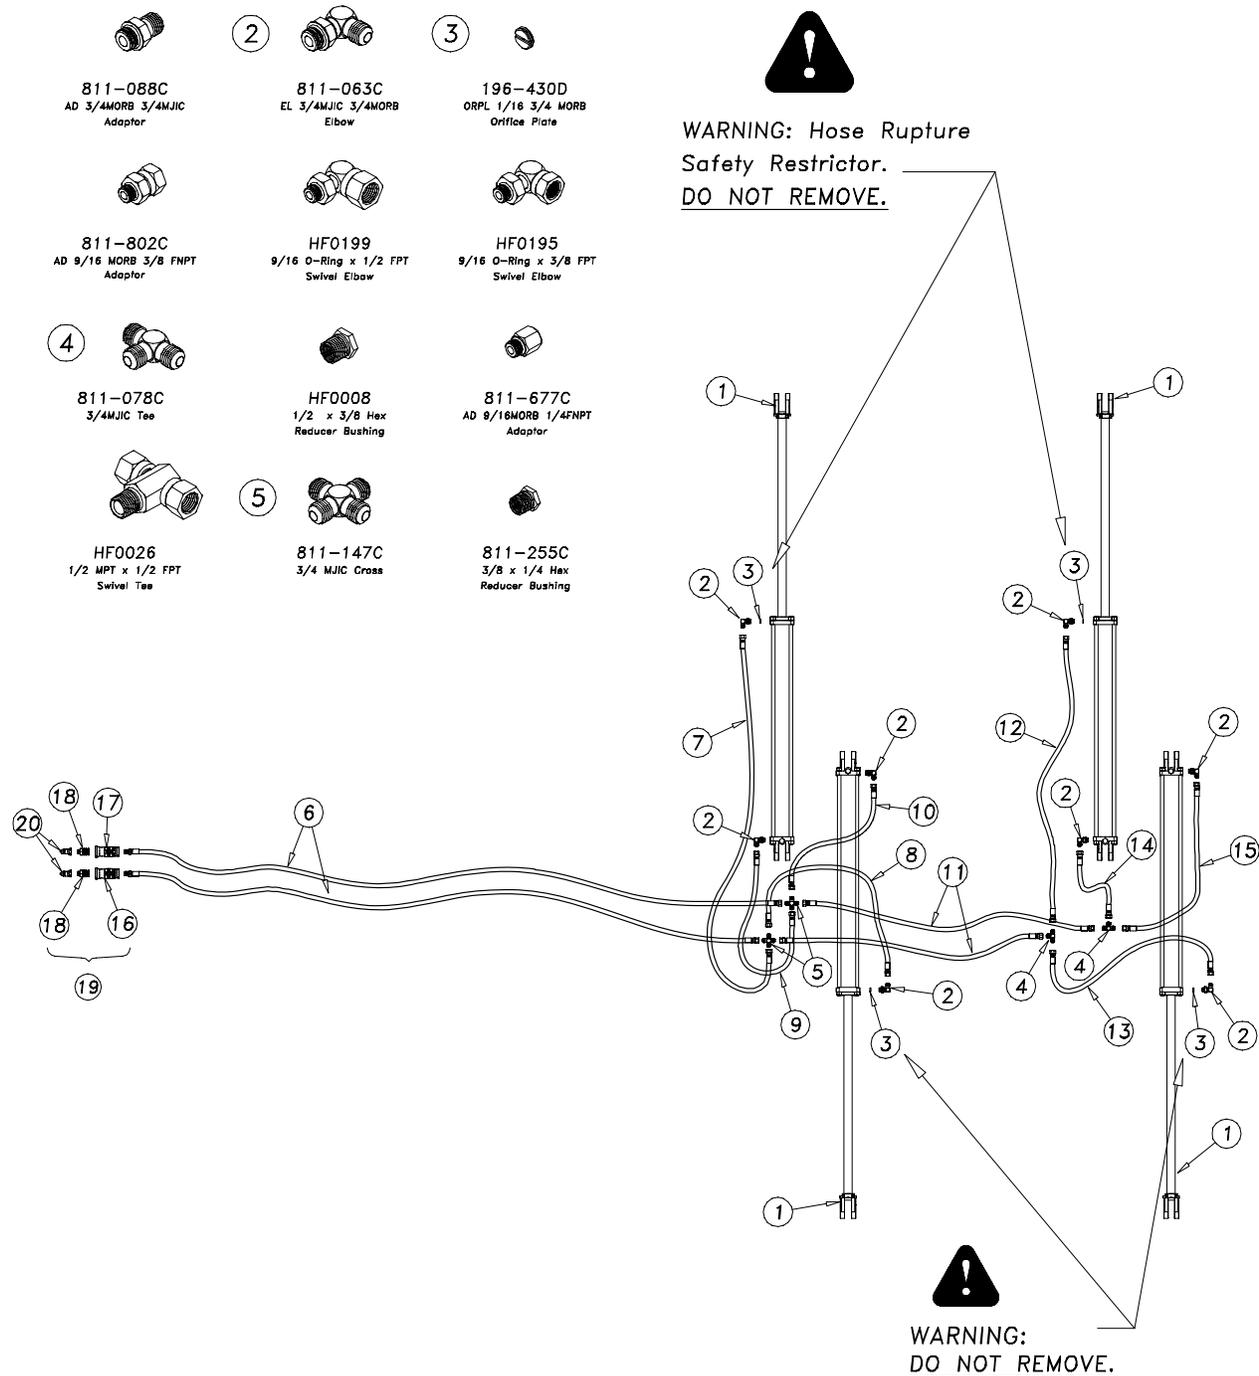

- Connect the back of the existing level bar assembly (Item 11, Figure 4) to the top of the torque tube extension bracket with the same 1 x 7 pin (12) and keeper bolt (13) as used before.
- Especially on narrow center units, you will need to pre-assemble the leveler assembly bracket (14) to the turnbuckle (15) or optional Hydraulic Cylinder (16) with the 1 x 9 Gr.8 hex bolt (17). Be sure to insert in direction shown.** Snug tight with nylon locknut. Attach the preassembled parts to the new front fold/support bracket (18) with a new 1 x 9 Gr.8 hex bolt (19) and nylon lock nut (20), snug this bolt but do not torque. Connect the top of the leveler assembly bracket (14) to the front of the existing level bar assembly (11) with a new 1 x 9 Gr.8 hex bolt (21) and nylon lock nut. Snug but do not torque.
- You are now ready to attach the new hitch frame (22) to the front of the disk. Use the existing 1 ¼ x 8 Gr.8 bolts (23) with top lock nuts (24) to attach the hitch. Use the 1 ¼" SAE flat washers (25) next to the ball joint to take out the slack in the connection. All slack must be removed for best connection wear life (add additional washers if necessary). Transfer the existing tongue jack (26) from the old hitch to the new one.
- Connect the level turnbuckle (15) or Hydraulic Cylinder (16) to the back of the hitch frame (22) using a new 1 x 6 Gr.8 (special 1 ¾" thread length) hex bolt (27) and nylon lock nut. The new hydraulic leveling cylinder requires two new longer hoses and a new straight adaptor fitting between the lock valve (35) and the cylinder. **Remove the two restrictor orifices (28) from the old cylinder with a screwdriver and install into the new cylinder ports before attaching hoses.** (see schematic on page 14). Check Hydra Grip hose handles to verify that the extended hose handle goes to the base end of the cylinder (see page 14).
- Install the level gauge pointer (29) onto the leveler assembly bracket (14). Secure with 1 1/2" machine washer and 3/16 x 2 cotter pin (30). Connect the level gauge link rod (31) between the back of the hitch frame (22) and the level gauge pointer (29) as shown with two 1/8 x 1 cotter pins and 3/8 flat washers.
- Finish by re-installing the manual pak container (32), safety chain (33), spring hose loop (34) and hydraulic hoses & hose clamps to the hitch frame (22) (see Figure 4).
- Attach the original hitch clevis (36) to the new hitch frame (22) along with the safety chain support (37) using two new 1 x 8 Gr.8 hex bolts (for narrow center disks) or 1 x 10 Gr.8 hex bolts (for wide center disks)(38). Use the original 1" lock washers and hex nuts. Torque these hex nuts until the hitch clevis is tight in the assembly.
- After all parts are assembled, double check bolts and nuts for tightness and re-connect the tractor to the disk harrow. Connect the hydraulic fold hoses first and cycle the unpinned front fold cylinders (if equipped) two or three times and check for leaks. Extend the fold cylinders and connect them to the wing frames with the hardware from before.
- Connect the lift and hydraulic level hoses (if equipped) to the tractor. Lift the machine up all the way. Slowly activate the hydraulic level cylinder in and out four or five times to purge the air in the level cylinder, also check for leaks. Lower and raise the machine a couple of times with the lift system to verify operation and check for leaks.
- Finished with Update.

Hydraulic Level Layout - Update, optional

Level Update Changes:
Install New 4x3 Cylinder (1), longer hoses (8) and new adaptor fitting (5). Reuse orifice restrictors (4) from old cylinder.

Level Update Changes:
Check Hydra Grip Handles. Red extend handle (9) should be routed to base end of cylinder (1) as shown. Red retract (10) routed to rod end of cylinder.
